This is in response to Applicant's amendment filed October 7, 2008.

The disclosure is objected to because of the following informalities: In claim 8, on line 2, "I" should be deleted.

Appropriate correction is required.

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-4 and 6-34 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The present specification fails to provide an adequate teaching/discussion regarding the operation/performance of counting the test pad reflectance values "to determine a test pad count and determining a test strip format as a function of said test pad count" as now claimed in claims 1, 11, 14, 15, 25, 30 and 33. The manner of how the test pad reflectance values being counted has not been clearly disclosed.

Claims 1-4 and 6-34 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112 set forth in this Office action.

Claims 1-4 and 6-34 are allowable over the prior art of record because the prior art fails to teach a method and its apparatus for identifying a test strip having a set of test pad, comprising: illuminating the test pads with at least one test signal having a wavelength; detecting a set of reflected signals from the test pads; generating an image comprising a set of reflectance values derived from the reflected signals, and counting the test pad reflectance values to determine a test pad count and determining a test strip format as a function of the test pad count; determining a test pad type from the image for at least one test pad from the set of test pads by comparing a reflectance value associated with the test pad with a set of reference reflectance values, wherein each of the reflectance values corresponds to the wavelength and is associated with a different reference test pad type; and identifying the test strip as a function of a set of determined test pad types.

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the

shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
